ABOUT ME

Frontend-focused fullstack developer. Builds React / Next.js 14 interfaces — SSR and SEO, reusable component systems, responsive mobile-first layouts, and real-time UX over WebSocket — on Java 17 / Spring Boot 3 APIs with PostgreSQL, Redis, and Docker. Has taken features from database schema and API design through to production UI across five projects, including multi-gateway payments and JWT/OAuth2 access control. Strongest on the frontend, and comfortable owning the backend work needed to ship.

TECHNICAL SKILLS

Frontend: React.js · Next.js 14 (App Router, SSR/SEO) · TypeScript · JavaScript (ES6+) · Angular 17 · Vite · HTML5 · CSS3 · Responsive mobile-first UI · WebSocket client (STOMP/SockJS)

Database & Caching: PostgreSQL · MySQL · Redis · Flyway

DevOps & Tools: Docker · Docker Compose · Git / GitHub · Swagger / OpenAPI · Bruno · Figma

Backend: Java 17 · Spring Boot 3 · Spring MVC · Spring Data JPA / Hibernate · Spring Security · REST API design · WebSocket (STOMP/SockJS) · Apache Kafka

Authentication & Security: JWT · OAuth2 / OIDC · RBAC · SMS & email verification · Checksum validation

Payments: VNPay · MoMo · ZaloPay · SePay — multi-gateway integration, async transaction handling

LANGUAGES

English — professional working proficiency (technical reading & writing)

PROJECTS

Airbnb Booking Platform , *Fullstack Developer* Sep 2025 – Jan 2026
Frontend: Next.js 14 (App Router, SSR/SEO), WebSocket (STOMP/SockJS) · Backend: Spring Boot 3 (Java 17), JWT, VNPay / MoMo / ZaloPay / SePay
- Built the Next.js 14 booking experience — server-rendered listing and detail pages with per-page metadata, improving SEO and first paint.
- Shipped real-time messaging and booking-status updates to the client over WebSocket (STOMP/SockJS), keeping guests and hosts in sync without page refreshes.
- Designed the booking and availability engine in Spring Boot — conflict detection and automated status transitions — the most complex logic in the product.
- Integrated four payment gateways (VNPay, MoMo, ZaloPay, SePay) with QR check-in and an analytics dashboard.
- Hardened the API with Spring Security, JWT, RBAC, and SMS/email verification.

Audi Service Booking , *Fullstack Developer* Apr 2025 – Oct 2025
Frontend: React 18 (Vite), scheduling UI · Backend: Spring Boot 3, Spring Data JPA / Hibernate, MySQL, Redis
- Built the React (Vite) scheduling interface — slot selection, conflict feedback, and booking status — the main customer touchpoint.
- Surfaced slot conflicts in the UI before submission, so double bookings are caught at the point of selection rather than after payment.
- Automated PDF invoice generation and a revenue dashboard for the service team.
- Integrated VNPay, MoMo, and ZaloPay checkout flows plus a customer-support chat.
- Built the Spring Boot 3 API on MySQL with Redis caching, checksum validation, and async transaction handling; secured with JWT and RBAC.

Apple-Style E-commerce Storefront , *Fullstack Developer* Aug 2024 – Dec 2024
Frontend: React (Vite), shared component library · Backend: Spring Boot, OAuth2 / OIDC, Redis, Docker
- Built the React (Vite) storefront around a reusable component library shared across product, cart, and checkout — consistent UI with less duplicated code.
- Cached the product read path in Redis, cutting database load on the highest-traffic queries.
- Containerised frontend and backend with Docker Compose for one-command setup and parity between environments.
- Secured authentication with Spring Security, JWT, OAuth2 / OIDC, and RBAC.

Book Views Online (E-commerce) , *Backend Developer* Apr 2024 – Aug 2024
Backend: Spring Boot 3 (Java 17), Apache Kafka, Redis, MySQL, Flyway · Frontend: Angular 17 SSR storefront
- Designed an event-driven ordering flow with Apache Kafka and Redis caching, raising throughput and cutting database load.
- Documented and versioned the REST API with OpenAPI (Swagger) for the Angular 17 SSR storefront.
- Managed MySQL schema changes with Flyway migrations.
- Implemented JWT / OAuth2 authentication and RBAC with Spring Security.

VTI Store (B2C E-commerce), *Fullstack Developer* Jun 2023 – Feb 2024
Frontend: React 18 · Backend: Spring Boot, OAuth2, Redis, MySQL, Flyway, Docker
- Built a React 18 storefront covering product browsing, cart, and checkout on a Spring Boot API.
- Backed product search with Redis caching to keep listing pages fast.
- Set up Flyway migrations and Docker-based environments; implemented JWT/OAuth2 authentication with RBAC.

EDUCATION

SAIGON TECHNOLOGY UNIVERSITY, *Information technology* Oct 2020 – Nov 2024

CERTIFICATES

VTI Academy — Fullstack Web Certificate Jun 2023 – Feb 2024
