NGUYEN PHUOC NGUYEN

FULLSTACK DEVELOPER

nguyennpcoder@gmail.com (+84) 393 204 904 Ho Chi Minh, Vietnam nguyennpcoder nguyennp-coder

ABOUT ME

Fullstack Developer with hands-on experience building 5+ production-grade web applications end-to-end using Java 17 / Spring Boot 3 on the backend and React, Next.js 14, and Angular 17 on the frontend. Skilled in designing secure REST APIs (JWT/OAuth2, RBAC), event-driven architectures with Kafka and Redis, and multi-gateway payment integrations (VNPay, MoMo, ZaloPay, SePay), alongside responsive SSR/SEO UIs and real-time interfaces over WebSocket. Comfortable owning features from database schema and API design through to UI and production deployment. Passionate about clean, maintainable, testable code and building reliable systems for fintech-scale workloads.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, SQL

Backend: Spring Boot 3, Spring MVC, Spring Data JPA / Hibernate, Spring Security, Spring AOP, REST API, WebSocket (STOMP/SockJS), Apache Kafka

Core CS: Data Structures, Algorithms, System Design, RESTful Architecture

DevOps & Tools: Docker, Docker Compose, Git/GitHub, Swagger/OpenAPI, Vite, Bruno, Figma

Frontend: React.js, Next.js 14, Angular 17, Redux Toolkit, RxJS, Ant Design, Tailwind CSS, Bootstrap; SSR & SEO, responsive/mobile-first UI, real-time UI (WebSocket)

Database & Caching: MySQL, PostgreSQL, Redis, Flyway (schema migrations)

Authentication & Security: JWT, OAuth2 / OIDC, RBAC, SMS/email verification, checksum validation

Payments: VNPay, MoMo, ZaloPay, SePay (multi-gateway integration, async transaction handling)

PROJECTS

Airbnb Booking Platform , *Fullstack Developer* Sep 2025 – Jan 2026
- Built an end-to-end booking platform with a Spring Boot 3 (Java 17) REST API and a responsive Next.js 14 frontend with SSR and SEO optimization.
- Designed secure authentication and RBAC using Spring Security, JWT, SMS verification, and email confirmation.
- Implemented real-time messaging and booking notifications via WebSocket (STOMP) and SockJS.
- Integrated multi-gateway payments (VNPay, MoMo, ZaloPay, SePay), QR check-in, and analytics dashboards.
- Developed booking/scheduling logic with availability conflict detection and automated status updates.

Audi Service Booking , *Fullstack Developer* Apr 2025 – Oct 2025
- Developed the backend with Spring Boot 3, Spring Data JPA/Hibernate, MySQL, and Redis, with secure checksum validation and async transaction handling.
- Built the frontend with React (Vite), including a real-time scheduling interface with conflict detection and slot management.
- Implemented RBAC authentication using Spring Security and JWT.
- Integrated VNPay, MoMo, and ZaloPay checkout flows and a customer-support chat feature.
- Automated PDF invoice generation and revenue dashboard reporting.

Apple Clone (E-commerce) , *Fullstack Developer* Aug 2024 – Dec 2024
- Built a full e-commerce stack with a Spring Boot backend and a React (Vite) storefront following a scalable, maintainable component architecture.
- Implemented secure authentication with Spring Security, JWT, OAuth2 OIDC, and RBAC.
- Optimized product retrieval and page performance using Redis caching to reduce database load.
- Containerized the stack with Docker and Docker Compose for consistent deployment environments.

Book Views Online (E-commerce) , *Backend Developer* Apr 2024 – Aug 2024
- Built a scalable e-commerce platform with Spring Boot 3 (Java 17) and Angular 17 SSR for performance and SEO.
- Implemented JWT/OAuth2 authentication with Spring Security and RBAC.
- Designed an event-driven architecture with Apache Kafka and Redis caching to reduce database load and improve throughput.
- Managed MySQL schema migrations with Flyway and documented REST APIs with OpenAPI (Swagger).

VTI Store (B2C E-commerce), *Fullstack Developer* Jun 2023 – Feb 2024
- Built a B2C e-commerce application end-to-end with a Spring Boot backend and a React 18 storefront supporting product browsing, checkout, and order processing.
- Implemented secure authentication using Spring Security, JWT, OAuth2, and RBAC.
- Consumed RESTful APIs with Redis-backed caching to improve search performance.
- Managed MySQL migrations with Flyway and containerized environments with Docker.

EDUCATION

SAIGON TECHNOLOGY UNIVERSITY, *Information technology* Oct 2020 – Nov 2024

CERTIFICATES

VTI ACADEMY, *Fullstack web* Jun 2023 – Feb 2024
